

INSTRUCTIONS:

1. Pick one of the tables below according to how often you get paid.
2. Count the number of dependents you claim, including yourself. Look for that number in the first column of the table.
3. Using only the row that contains your household size, look across to find the income bracket that is nearest but not more than your current employment income before tax . **If you work more than one job, add up the income from all jobs before tax .**
4. Using only the column that contains your income bracket, look at the top of the column for your poverty percentage (%). **Example: if your household size is 3 and you make \$12,000 per year then your nearest income bracket is \$10,390 and your poverty level is 50%**
